AI CHAT SAFETY MONITOR

INTRODUCTION

This project is designed to create a Child-Safe AI Mentor for children, teens, and mature audiences. The purpose of this AI Mentor is to provide a safe, educational, and engaging platform for users to interact with an AI, which helps them with questions while ensuring the content provided is appropriate for the age group

PROBLEM

- AI chatbots may generate unsafe or inappropriate content, especially for children and educational settings

SOLUTION

- A Streamlit-based AI safety monitor app with:
- NLP filters for harmful language
- Role-based filtering for kids/schools
- Real-time logs and alerts

TECHNOLOGIES WE USED

- Python
 - Streamlit
 - NLP (profanity detection)
 - AI/ML APIs
 - Google Colab for development
- 

HOW OUR APP WORKS

- User interacts with AI chat
 - Backend analyzes input/output
 - Filters flag unsafe content
 - Logs are stored and reviewed
- 

FUTURE ENHANCEMENTS

- **Voice & Image Monitoring**
 - **Parent/Teacher Dashboards**
 - **Multilingual Safety Filters**
 - **Real-time Notifications**
- 

**THANK
YOU**
