Building AI for Impact

INTRODUCTION

Our system (Safe Mentor AI) offers a personalized AI-driven platform with distinct modes for children, teens, and adults, ensuring age-appropriate engagement. It promotes growth through goal tracking and positive reinforcement via dynamic badges. An integrated content moderation system filters unsafe or inappropriate inputs and provides real-time flagging and reports for parental oversight. This holistic solution fosters a safe, supportive, and empowering digital space that nurtures emotional intelligence, learning, and personal development.

PROBLEM

Children, teens, and adults increasingly engage with AI tools, but many lack safeguards for age appropriate, positive, and meaningful interactions. There is a critical need for an AI system that ensures safe, role specific guidance while encouraging personal growth through engaging and filtered content.

SOLUTION

- **A Streamlit-based AI safety monitor app with:**
 - **NLP filters for harmful language**
 - **Role-based filtering for kids/schools**
 - **Real-time logs and alerts**
- 

TECHNOLOGIES WE USED

- Python 3.8 +
- Streamlit
- Groq API Key
- Uvicorn (Fast API)

HOW OUR APP WORKS

Role Selection: Users select a role (Child, Teen, or Mature), which sets the content filtering level.

Text Input: The user enters text or a query into the app interface.

Theme Detection: The app analyzes the text for positive themes (e.g., creativity, curiosity) and displays the most relevant badge.

Content Filtering: NLP algorithms scan the input for unsafe, harmful, or age-inappropriate content based on the selected role.

Flagging & Alerts: Harmful content is flagged in real-time, logs are maintained, and flags are sent to parents or administrators.

FUTURE ENHANCEMENTS

- **Voice & Image Monitoring**
- **Parent/Teacher Dashboards**
- **Multilingual Safety Filters**
- **Real-time Notifications**

**THANK
YOU**
